Belimo Accelerated Sales Growth in The First Half of 2026

In the first half of 2026, Belimo operated in dynamic end markets amid an economically and geopolitically challenging environment. Non-residential construction spending remained subdued, while data centers continued to grow strongly and energy-savings opportunities drove renovation activity.

Against this backdrop, Belimo made solid progress in executing its long-term growth ambitions, further strengthening its market position through disciplined execution of its strategy. Belimo delivered accelerated sales growth of 29.6% year-on-year in local currencies (first half of 2025: +20.6%), resulting in sales of CHF 676.4 million in the first half of 2026. Belimo continued to benefit from the megatrends of urbanization, energy efficiency, and digitalization. Data center cooling solutions accounted for slightly more than half of the company's absolute sales growth in the first half of 2026. Despite subdued
