Belimo Holding AG

Belimo Accelerated Growth in 2025

Belimo continued to execute on its long-term growth strategy in 2025. As part of this, the company is on track with expanding its facilities in Switzerland and the US, and inaugurated its CESIM® House in China in 2025. Moreover, Belimo's RetroFIT+ initiative gained momentum in 2025, with partners identifying more project opportunities and achieving higher conversion rates. Belimo continued its considerable investment in research and development activities. In 2025, the company launched the first products of its New Digital Generation, improving energy efficiency and increasing flexibility for customization. In Asia Pacific, Belimo further expanded its market reach and strengthened its regional capabilities. To best address the evolving data center vertical, Belimo expanded its global data center organization, and implemented sector-specific innovations. All of this reaffirms Belimo's strong position as a global market leader in innovation, customer centricity, quality, and industry leading lead times.

Belimo delivered accelerated sales growth of 23.3% year-on-year in local currencies (2024: +13.1%), leading to CHF 1 121 million sales in 2025. This excellent performance is
